ABOUT ME

Junior Product / UI/UX Designer building token-based design systems, research-backed user flows, and advanced Figma prototypes across web and mobile through two concurrent internships. I focus on consistent, scalable interfaces and smoother design-to-engineering handoff, and use AI tools like Claude in my workflow. B.S. in User Experience Design (WGU), expected Nov 2026. Target roles: UI/UX Design Intern · Product Design Intern · Junior UX Designer.

EDUCATION

Western Governors University

Bachelor's degree in User Experience Design *Expected Nov 2026*

- Skills developed through WGU's UX Design program: user-centered design, UX/UI design, information architecture, wireframing, prototyping, and accessibility. Research methods include user interviews, surveys, usability testing, A/B testing, competitive analysis, personas, empathy mapping, and journey mapping.
- Business coursework in marketing, consumer behavior, brand management, project management, and data-informed decision-making, connecting user research and design solutions to business objectives.

Coursera

Google UX Design Professional Certificate *Expected Nov 2026*

- Hands-on UX program with practical projects focused on user research methods and usability testing to build job-ready UX design skills.

EXPERIENCE

UI/UX Design Intern **Jul 2026 – Present**

Flyrank AI *Remote*

• Built a complete Figma token-based design system (variables, 4-color semantic palette, typographic scale) with every style linked to shared tokens, cutting visual rework by ~60% and making global UI updates ~90% faster.
• Ran competitive audits across 10+ competitor and industry sources for men's luxury formalwear, paired with desk research (customer reviews, industry return-rate data, and independent style guides), to design a specialist fit-confirmation checkpoint addressing recurring fit-uncertainty complaints.
• Designed multi-state UI patterns in Figma using components and variants (dropdown menus, bottom-sheet overlays, tabbed selectors, collapsible navigation) and documented interaction behavior for engineering handoff.
• Cut the UI element count by over half under time constraints by consolidating redundant components and styles, tying each removal to stated user goals and core flows.
• Developed a 7-section information architecture and three annotated user flows (primary task, onboarding, recovery with escalation) covering discovery, fit confirmation, and purchase.

Product Design Intern **Jul 2026 – Present**

Stealth Startup *Remote*

• Led creation of a Figma token-based design system from scratch for a product that previously had none, then applied it across two mobile apps and a desktop dashboard as one of ~5 design interns reporting directly to the founder.
• Built high-fidelity interactive prototypes with complex component states, dynamic overlays, typeable form fields, and conditional logic for engineering handoff, cutting demo setup and execution time by 30+ minutes per demo.
• Delivered ~30 new screen designs and refinements (plus multiple overlays), collaborating with the founder, an engineer, and ~5 interns to simplify design-to-engineering handoff.
• Conducted design reviews and guided teammates on Figma prototyping and responsive design best practices.
• Role performed under a strict NDA: the scope and outcomes above are accurate, and project and company details are confidential.

PROJECTS

Full Case Studies: **https://ericarieldelapaz.tech**

Flyrank AI *Remote*

• SecureID (Case Study): Identity-verification platform with a user flow and an analyst dashboard built on one shared token system; cut the analyst screen to three primary actions (Reject, Escalate, Approve) with overlays.
• Honda of Clear Lake (Practice Audit): Heuristic evaluation of a dealership website against Nielsen's 10 heuristics, with every finding rated on a 0–4 severity scale.
• Devtective (Google UX Certificate capstone): Gamified coding-habit app concept with personas, journey maps, a design system, and high-fidelity screens, designed around helping learners re-enter after a gap.
• Vextaro (Flyrank AI internship): Men's luxury formalwear rental app with a specialist fit-confirmation checkpoint, 7-section IA, and token-based design system.

SKILLS

Design: Product Design, UX/UI Design, Interaction Design, Visual Design, Visual Hierarchy, Typography, Style Guides, Responsive Design, Mobile-First Design, Accessibility (WCAG)

Research & Process: User Experience Research, Qualitative Research, Quantitative Research, Competitive Analysis, Research Synthesis, User Journey Mapping, Personas, Usability Testing, Design Thinking, Information Architecture, User Flows, Wireframing, Prototyping

Systems & Handoff: Design Systems, Design Tokens & Variables, Components & Libraries, Engineering Handoff, HTML, CSS

Tools: Figma, FigJam, GitHub, Microsoft Office, Google Workspace, Granola AI, Claude, Gemini, GitHub Copilot, Grammarly

Soft: Cross-Functional Collaboration, Communication, Design Critiques, Empathy, Problem-Solving, Adaptability and Resilience, Critical Thinking and Decision-Making

Tools: Figma, GitHub, Microsoft Office, Google Workspace, Granola AI, Claude, Gemini, GitHub Copilot, Grammarly

LEADERSHIP & ACTIVITIES

Design Mentor & Workshop Facilitator

Stealth Startup (Product Design Internship)

Provided on-demand mentorship and learning support to fellow design interns during my Product Design Internship, owning small-group and 1:1 sessions focused on practical, systems-minded UI/UX skills.

• Mentored 2–3 design interns per session in 1:1 and small-group formats, reviewing work with a focus on clarity, usability, and maintainable design systems.

• Planned and led monthly design workshops on responsive design and advanced Figma prototyping, including using Figma variables inside interactive prototypes.
