Eric Ariel De La Paz

Texas, U.S.A. | +1 (832) 758 - 4781 | ericforall247@gmail.com (Preferred) | https://ericarieldelapaz.tech | https://www.linkedin.com/in/eric-ariel-de-la-paz | https://github.com/EricArielDeLaPaz

Junior Product / UI/UX Designer with two concurrent internships building token-based design systems across web and mobile, creating consistent, scalable interfaces and smoother design-to-engineering handoff. Combines strong UX research and information architecture with advanced Figma prototyping to clarify user flows, reduce visual rework, and support accessible, WCAG-aligned experiences.

EDUCATION

Western Governors University

Bachelor's degree in User Experience Design *Expected Nov 2026*

- Through WGU's UX Design bachelor's program, I've developed skills in user-centered design, UX/UI design, information architecture, wireframing, prototyping, visual communication, and accessibility. I've learned research methods such as user interviews, surveys, usability testing, A/B Testing, competitive analysis, user observation, persona development, empathy mapping, and customer journey mapping to identify user needs, understand behaviors, uncover pain points, and evaluate design effectiveness. I can use these insights to inform design decisions, validate ideas, and create intuitive, accessible, and effective digital experiences.
- From a business perspective, I've gained knowledge in strategic problem-solving, critical thinking, marketing, consumer behavior, brand management, project management, and data-informed decision-making. I can connect user research and design solutions to broader business objectives, identify improvement opportunities, enhance customer satisfaction, and support business growth. This combination of UX research, design, and business knowledge allows me to approach challenges strategically, communicate recommendations to stakeholders, and help develop solutions that balance customer needs with organizational goals and measurable outcomes.

Coursera

Google UX Design Professional Certificate *Expected Nov 2026*

- Hands-on UX program with practical projects focused on user research methods and usability testing to build job-ready UX design skills.

EXPERIENCE

UI/UX Design Intern **Jul 2026 – Present**

Flyrank AI *Remote*

- Built a complete Figma token-based design system with variables, a 4-color semantic palette, and typographic scale, linking styles to shared tokens to cut visual rework by ~60%, reduce inconsistencies to near-zero, and make global UI updates ~90% faster.
- Conducted competitive audits across 10+ competitor and industry sources for men's luxury formalwear and paired them with targeted user interviews to inform product decisions, creating a specialist fit-confirmation checkpoint that directly addressed recurring fit-uncertainty complaints.
- Designed multi-state UI patterns in Figma using components and variants (dropdown menus, bottom-sheet overlays, tabbed selectors, collapsible navigation) for key app and website flows, documenting interaction behavior to make states and transitions easier for engineers to understand and implement.
- Reduced UI element count by over half under time constraints by consolidating redundant Figma components and styles for the men's luxury formalwear experience, practicing how to defend removals by tying every decision back to stated user goals and core flows.
- Developed information architecture with seven sections and designed three annotated user flows in Figma to show how users move end-to-end through discovering men's luxury formalwear, confirming fit, and completing purchases, while clarifying primary tasks, onboarding, and recovery with escalation.

Product Design Intern **Jul 2026 – Present**

Stealth Startup *Remote*

- Led creation of a Figma token-based design system from scratch for a product that previously had none, then applied it across two mobile apps and a desktop dashboard to create a more consistent, smoother user experience as one of ~5 design interns reporting directly to the founder.
- Built high-fidelity, interactive Figma prototypes with complex component states, dynamic overlays, typeable form fields, and conditional logic to closely simulate final user experiences for engineering handoff, enhancing the demo workflow and reducing setup and execution time by 30+ minutes per demo.
- Conducted design reviews, guided teammates on technical Figma prototyping and responsive design best practices, and led workshops for current and new team members to demonstrate design-system workflows, tools, and processes as a product design intern reporting directly to the founder.
- Delivered ~30 new Figma screen designs and refinements (plus multiple overlays) while collaborating closely with the founder, an engineer, and ~5 interns to simplify design-to-engineering handoff and support teammates' growth in design systems, variables, and advanced prototyping.

- Role performed under a strict NDA; responsibilities and outcomes above (design system work, advanced prototyping, and collaboration with the founder and broader team) reflect my actual scope while specific project and company details remain confidential.

SKILLS

Technical: HTML, CSS, Product Design, UX/UI Design, Interaction Design, User Experience Research, Usability Testing, Wireframing, Prototyping, Information Architecture, User Flows, Design Systems, Design Tokens & Variables, Components & Libraries, Visual Design, Responsive Design, Accessibility (WCAG), Research Synthesis, Competitive Analysis, User Journey Mapping, Personas, User Interviews, A/B Testing, Design Thinking, Visual Hierarchy, Typography, Style Guides, Mobile-First Design, Qualitative Research, Quantitative Research, Engineering Handoff

Tools: Figma, Github, Microsoft Office, Google Workspace, Granola AI, Claude, Gemini (Student Plan), Copilot (Student Plan), Grammarly

Soft: Cross-Functional Collaboration, Communication, Design Critiques, Empathy, Problem-Solving, Adaptability and Resilience, Critical Thinking and Decision-Making

LEADERSHIP & ACTIVITIES

Design Mentor & Workshop Facilitator

Stealth Startup (Product Design Internship)

Provided on-demand mentorship and learning support to fellow design interns during my Product Design Internship, owning small-group and 1:1 sessions focused on practical, systems-minded UI/UX skills.

- Mentored 2–3 design interns per session in a mix of 1:1 and small-group formats, answering questions and reviewing work with a focus on clarity, usability, and maintainable design systems.
- Planned and led recurring design workshops (roughly once a month) to help teammates practice responsive design principles and advanced Figma prototyping techniques in a collaborative setting.
- Guided the team in using Figma variables within interactive prototypes so they could explore, test, and refine design ideas more efficiently together.
